Fikadu Blete defru	B.Sc degree	65	Male	+251919641602	Method for Extraction of Fuel from Used Tiers	Extraction of fuel from used tiers and production of carbon as byproduct which is vital for our economy, in both the supply of products and import substitution. Carbon replaces charcoal, and can be used for producing electrode, grinder, carbonic acid and lead.	5000000	I have supplied fuel a company, but i can not fulfill company's demand quantities. Other companies also demanding the product. Profitability depends on scale of production. Current profitability rate is about 60%.	The project is already implemented, the since the amunt is too small it requires enlargement.

BELEN SOLOMON	BA Degree wih Business Management	41	Female	0911508630	Modern Farming (Hydroponics and Aquaponics farming system)	The project's proposal is to integrate hydroponics and Aquaponics with modern farming techniques to develop an effective, sustainable system for growing both plants and fish in a single place uses 90% less water than traditional farming	4	As we can see, food shortages are occurring in Ethiopia at the moment, yet the market is still accessible and reasonably priced for the general public. There is enormous profit potential in this business.	To create the project, my business proposal will be implemented in Addis Ababa. This project is sweat able for the Sheger River Project since we use the water by recycling, so I require sustainably managed property surrounding rivers or any land.

Name	Education	Age	Gender	Phone Number	Title	Project Aim	Annual Sale	Capital	Description
Eskindir Solomon Shiferaw	B.Sc Mechanical Engineering	40	Male	0938394199	CMC(Carboxymethyl Cellulose) manufacturing for chemical industries PLC	Carboxymethyl cellulose(CMC) is fabricated from chemical synthesis of cellulose extracted from banana and pseudo-banana stems and peels cultivated in Ethiopia in order to substitute the imported industrial CMC with huge amount of dollars that is used as an anti-redeposition agent, emulsifier, suspension, and stabilizing agent by creating thick inert hydrogel base solution for many chemical products manufacturing industries like Soap, detergents, Paints, food and beverage, paper and paper packaging etc. To mitigate such desire for an imported industrial Chemical stabilizer and thickener by these industries, we designed an efficient prototype cellulose fiber extraction machine from banana and Pseudo banana, that we manufactured in our Research Centre. Specifically, in order to extract micro crystalline cellulose, Short fibrillates and long fibers to further synthesize the cellulose (CMC)	11000000	Ethiopia release above 500,000tons/year of agricultural biomass that serve as a source for crude cellulose which are the main raw material used to produce the product are; Banana stems, false banana peels, "Enboch" (Water hyacinth) etc. Ethiopian chemical products manufacturing industries are importing above 8,000tons of cellulose derivatives which costs above 12 million USD annually CMC manufacturing plc. plan to invest 11 million ETB Total capital investment for the startup out of 8 million ETB for working capital CMC manufacturing plc. plan to incorporate with potential private stakeholders and founders of the business idea and 40% off the investment capital will be covered by the owners and the 60% will be back loan. CMC manufacturing plc. Plan to employe about 30 professionals and 20 gig workers. CMC manufacturing plc, Plan to earn a ROI around 36.36% with the average net profit of 4 million during the five-year productive life of the business and keeps increasing thereof CMC manufacturing plc will have its payback period in 4 years' time and will earn a cumulative net profit of 21 million during the five productive years.	Carboxymethyl starch polymers are the derivative forms of cellulose and starch respectively that is found in most plants cell wall, through mechanical and chemical extraction methods. The process involved in the primary extraction of the cellulose from pseudo banana plant cell wall are chemomechanical further alkali purification and bleaching prepare the crude cellulose and starch ready for an alkalization and carboxylation reaction at a moderate temperature, reaction time and concentration using (25-40%) caustic soda(Alkali hydrolysis), 1:1.25 ratio cellulose to chloroacetic acid(carboxymethylation) and isopropanol (solvent) the reaction will finally end by neutralizing the product with acetic acid and washing away the side reactions like sodium glycolate and sodium chloride with methanol, ethanol, acetone. As a result, we get the industrial chemical viscosity modifier, stabilizer, suspension agent, binder and thickener used by many chemical products manufacturing industries like water-based paint, liquid detergent and soap, agriculture, food and beverage industries which is commonly known as industrial CM Cellulose and CM starch to substitute the imported industrial chemical product CMC.

Ayalew Assefa Mola	Masters	39	Male	0913267279	Outsource Employee Administration and Cleaning Service	HR outsourcing can be considered as the handover of some or all of the human resource management of a company to an external service provider. HR outsourcing refers to hiring external firms to perform certain recruitment-related tasks for your company. These tasks may include recruiting, payroll, benefits administration, IT services, etc. Outsourcing a commercial employee and cleaning service for business is a strategic decision. Outsourcing offers many benefits to business owners who want to focus on growing and improving their business rather than focusing on business maintenance and cleaning issues, especially amid a growing workload and on a tight budget.	500000	Human Resources Outsourcing (HRO) is one of the major sectors in the Business Process Outsourcing (BPO) domain. Companies lack the financial, human and technological resources to handle critical functions of the human resource (HR) management generally opportunity for Human resource outsourcing services. Companies with less employee strength are also willing to focus on outsourcing their human resource functions, as service providers are creating appropriate outsourcing models that suit the organization, providing employee productivity benefits. In Ethiopia many job opportunity tasks special in Large; medium and small company administration of employees. Therefore it create source of revenue.	Outsource Employee Administration and Cleaning Service will start works in Addis Ababa main office. The company recruits experienced and fresh employees, finding potential customers within the city via social medial, by searching or scanning business owners or private company, face to face discussion, etc

Mekbib Engida Belayneh	BSC in mechanical Engineering	36	Male	0922121881	Design and manufacturing of thresher machine.	Project Proposal: Wheat Thresher Machine Our project aims to develop an innovative and advanced wheat thresher machine that revolutionizes the threshing process. With superior performance, customizable settings, and a durable design, our machine will minimize grain loss and provide efficient and time-saving wheat threshing. We will focus on user- friendly operation, comprehensive after- sales support, and continuous research and development to stay ahead of the competition. By addressing the needs of farmers and agricultural cooperatives, we aim to establish ourselves as a leading provider of high-quality wheat thresher machines, enhancing productivity and profitability in the wheat industry.	1200000	The market potential for our wheat thresher machine is significant, as it caters to the needs of farmers and agricultural cooperatives in the wheat industry. With the increasing demand for efficient and time-saving agricultural machinery, our innovative and customizable machine has the potential to capture a substantial market share. By offering competitive pricing, comprehensive aftersales support, and continuous product improvements, we anticipate strong customer loyalty and repeat business. This, coupled with the potential for expansion into related agricultural equipment, positions our business idea for long-term profitability and growth.	The operational mechanism of our wheat thresher machine involves several key steps. First, the wheat stalks are fed into the machine's intake mechanism, which guides them towards the threshing unit. The threshing unit employs a combination of mechanical force and separating mechanisms to separate the grains from the stalks. The separated grains are collected in a designated container, while the remaining stalks and debris are expelled through an outlet. The machine's settings can be adjusted to accommodate different wheat varieties and harvesting conditions. Additionally, safety features and controls ensure smooth and efficient operation. Overall, our wheat thresher machine streamlines the threshing process, maximizing grain yield and minimizing loss.

Bisrat Alemayehu	MSc	35	Male	+251906530046	Sustainable Urban Drainage System (Specialty contractor)	project idea = Constructing sustainable urban drainage system. problem the project will solve = urban area flood inundation and water bodies pollution. Causes = urbanization itself; urbanization disturb the rainfall-runoff response by changing land cover to hard surface or impermeable. impermeability increases runoff by blocking infiltration to ground. In contrast to its objectives, Conventional drainage system collect and transport every drop of rain water to downstream areas; at the downstream areas the collected runoffs usually create flood inundation and water pollution. Solution = constructing sustainable urban drainage system. It manages runoff by changing urban area to green sponge city.	15000000	Customers = city administrations and real estate developers. Demand = Big cities in Ethiopia highly demand the solution for urban areas flood inundation risk and water bodies pollution. My project is a solution for the problems. In other words, my project has high demand in Ethiopia. The project also reduce government cost by merging urban greenery and drainage system. Profitability = Due to patent protection the price of the service will be decided by negotiation. That means, the profit of the project will be decided in a reasonable way by myself; for now the profit is 25% of total cost of construction.	Step -1: Incorporating this new drainage system in urban infrastructure policy. step-2: Making public private partnership with city administrations or finance minister. step-3: Starting the business 1. Installing plastic input making factory 2. Making design of sustainable drainage system 3. Constructing sustainable drainage System according to design.

Fikru Gebre Dikumbab	MSc	35	Male	+251952709494	Multi Purpose Earth Brick Machine	Olio Plc's Multi- Purpose Earth Brick Machine is a versatile and eco-friendly innovation that produces high-quality bricks, paving bricks, and charcoal briquettes, ideal for sustainable construction. Its unique interlocking brick system simplifies installation, reducing the need for skilled labor and saving time and money. In addition to bricks, the machine also produces paving bricks suitable for outdoor areas. Furthermore, it can produce charcoal briquettes, adding to its multifunctionality.	5500000	The market and profit potential of Olio Plc's business idea are significant, given the increasing global demand for sustainable and affordable housing solutions. As the need for environmentally friendly construction practices grows, the Multi-Purpose Earth Brick Machine's ability to produce high-quality bricks, paving bricks, and charcoal briquettes positions Olio Plc at the forefront of a burgeoning market. The potential for cost savings in construction, job creation, and the machine's versatility make it an attractive investment. Additionally, the scalability of the business idea allows for expansion into various regions, further enhancing its profit potential	The operational mechanism of Olio Enterprise involves the production and distribution of sustainable and affordable Multi-Purpose Earth Brick Machines. The process begins with sourcing raw materials and outsourcing some parts to build the machines. Olio Enterprise also establishes partnerships with local communities, town administrators, and NGOs to identify target areas for implementation. The company engages in community outreach, providing training and support for local production and construction activities. This approach fosters job creation and empowers communities to address their housing needs.
yusuf ali mergiaw	masters degree	35	Male	0920223480	production and selling of multi crop thresher machine	as we know agriculture is the back bone of Ethiopian economy, but the coverage of mechanization is not more than 10%. it also mostly focus on tillage machineries. not only that but also post harvest loss covers from15% - 27% due to lack of appropriate technologies, there is loss, lack of quality etc. as a result i do have a machine which can thresh different types of crops.	1200000	interims of market market potential, there is a huge need from farmers, institutes, research centers, investors and entrepreneurs. be cause they use combine harvesters by renting. even though they have complains on not accessible on fragmented lands, its cost of rent, problems of transportation. due to that they ask why not they get small scale machines instead of combiners. interims of market profit i try to get 1/3 of the machine sell as a profit. and i will give service and can collect money.	this business idea will be visible when i get supports interms of money and place and other supports i try to open my own shop and i will start mass production. because i have a finished proto type.

Our platform prioritizes community engagement, building trust through user profiles and ratings. FamilySooq is not just an app; it's a dynamic marketplace fostering local connections and seamless transactions.	10000000	FamilySooq's potential in Ethiopia is vast, targeting a population of approximately 120 million. With a diverse range of categories, localized features, and a growing digital market, the app can tap into a significant user base. As user engagement rises, there's substantial market potential, translating to increased profitability through premium listings, promotions, and strategic partnerships within this untapped market.	FamilySooq operates as a user-centric classified app in Ethiopia, connecting buyers and sellers seamlessly. Users post products or services independently, utilizing a self-service platform. The app employs geotargeting for local relevance, enhancing community engagement. Secure in-app transactions and a user-friendly interface ensure efficient operations. Premium services like featured listings and advertising options contribute to revenue. FamilySooq's innovative approach centers on simplicity, trust-building, and fostering a dynamic marketplace experience.
aragew ambew	degree	32	Male	091828167	fertilizer row seeder	The fertilizer applicator is an equipment used for the application of dry fertilizer and other powder, granule or pellet chemical to plant. The fertilizer can speed up the process of fertilizer application in farming. This equipment can boost the efficiency in fertilizer application by 40 - 80%. The fertilizer applicator, otherwise known as a spreader, is a machine that applies dry, granular nutrients to fields.	100000	Agriculture remains a critical part of Ethiopia's economy, accounting for 40 percent of the gross domestic product (GDP), 80 percent of exports.so that the machine is directly related to agriculture and it is very profitable and efficient	first enougn amounyt of fertilizer is adder to the fertilizer storage tank ,second carry the total machine at the back of our body then move as we want dpendind up of the distance of the crop we want to give fertilizer.in the machine when we press the inner tube the fertilizer comes down to the flexible hose and enter to the inner tube .immedately the discharge tube opens and the fertilizer spreaded.

Dawit Tesfaye Daka	Masters degree (MSc)	32	Male	0917080955	Injera Manufacturing Company	Producing and providing injera is very important since our community relies on injera for its daily food items. In Nekemte City, there are not enough injera-providing companies that can meet the interests of the community. We need to produce the injera from different crops related to the local culture, and we will distribute it to all hotels and the community as well. It will guarantee the nutritional status of the community, and it will also be costeffective, and we will provide an adequate amount for our community. Thank you for considering!	3000000	Since we will buy the teff, maize, and others directly from the farmer, it can be very profitable work because Nekemte City is a very huge and fast-growing city. There are different universities and colleges that can increase the magnitude of the populations, but unfortunately, there is not enough company providing injera, which directly increases the amount of injera needed daily. Hopefully these reasons are our evidence to be profitable. Thank You!	If we obtain the budget needed for our project, we will discuss with hotel owners, supermarkets, colleges and schools, and other organizations how to provide injera daily for them. We will select the space by discussing it with city administrators, and we will also buy and install all necessary materials using the Nekemte City poly technique. We will assign the workers accordingly. Thank you!	
Ebsa Yonas Shuma	Degree	32	Male	251932183970	Manufacturing	As is well known, the majority of the population in Addis Ababa benefits from hotel food. the hoteliers have trouble providing clean injera. Therefore, I want to make clean injera and supply it to hotels to ensure the safety of the people of my city.	1000000	the main result is to ensure the safety of one's own people. but according to my plan If I supply 10,000 loaves of bread a day to hotels, if I get 50 cents per loaf of bread, it means 5000 birr a day.	Renting a large house with adequate electricity, buying the necessary machinery, bringing in a supply of xeff from the rural area, building a mill and hiring a professional

Habtegebreal Adane Tsegaw	Masters	29	Male	0923467364	Adotify	Adotify is an innovative digital platform that transforms advertising by integrating ad with prizes. Companies can show their ads on Adotify, giving users the chance to win various rewards. Users engage with the ad by watching or reading it and answering a short set of questions. Correct answers earn users valuable tickets. When the desired number of users is reached, the system randomly selects winners for the enticing prizes. Adotify charges a 10% service fee to companies based on the prize value. This platform facilitates effective engagement between businesses and their target audience, offering exceptional value for both parties involved.	5000000	According to Statista, the Digital Advertising market in Ethiopia is expected to experience a 6.74% growth between 2024 and 2028, reaching a market volume of 4.87 billion Ethiopian Birr (ETB) in 2028. Adotify, aiming to capture 25% of the market share, plans to generate revenue of approximately 1.24 billion ETB. With a projected profit margin of 40%, Adotify anticipates earning around 496 million ETB in profit.	The operational mechanism of Adotify is as follows: Advertisers upload their ads onto the platform, including essential information and comprehension questions. Users engage with the ads by watching or reading them, and then answer the related questions. Successful completion of the questions earns users valuable tickets. Once the desired number of participants is reached, the system randomly selects winners from the pool of ticket holders. Prizes can include cash rewards, products, or services. Adotify charges a service fee of 10% of the prize value to advertisers. This operational model ensures user engagement, effective advertising, and creates a mutually beneficial ecosystem for advertisers and users.

Melaku Kebede Deti	BA degree	28	Male	+251917037872	MK Coffee House	proposal for the establishment of MK Coffee House, a unique and inviting coffee shop that will offer a premium coffee experience in the heart of our community. Our goal is to create a warm and welcoming environment where customers can enjoy high-quality coffee, delicious pastries, and a comfortable atmosphere to socialize, work, or simply relax. MK Coffee House will differentiate itself by offering a wide variety of specialty coffee drinks, including singleorigin pour-over coffee, artisanal espresso beverages, and unique signature blends. In addition to our coffee offerings, we will provide a selection of freshly baked pastries, sandwiches, and light snacks to complement the coffee experience.	100000	1.Market Size and Growth: The coffee industry is a thriving market globally, with a consistently growing consumer base. According to market research, the global coffee market is projected to reach a value of over \$155 billion by 2027. This market growth presents significant opportunities for MK Coffee House to capture a larger share of the market and attract a diverse range of customers. 2. Target Customer Segments: By implementing initiatives to enhance the customer experience, MK Coffee House can attract a broader range of customer segments. This includes coffee enthusiasts, professionals seeking a relaxing atmosphere to work, students, and socializing individuals. By catering to these segments with personalized offers, loyalty programs, and an inviting ambiance, MK Coffee House can establish loyal customer relationships and increase market share.	Location and Facilities: Selecting a suitable location for the coffee house, with high foot traffic and visibility. Mer and Product Offering: Developing a menu that includes a variety of coffee drinks, teas, as well as a selection of pastries, sandwiches, and snacks. Quality Control: Implementing quality control measures to ensure that the coffee and food items meet high standards, and training staff to prepare and serve products consistently. Customer Service: Establishing custome service protocols to ensure that customers are greeted warmly. Marketing and Promotion: Creating a marketing strategy to attract customers, which include social media promotion, local advertising, and partnerships with other businesses or organizations. Financial Management: Developing a financial plan to manage costs, set prices. Customer Experience Focusing on creating a welcoming and comfortable atmosphere for customers

Tenaye Tilahun Almaw	BSC Degree Computer Science	28	Male	0923230472	Boxing Competition Machine	Boxing competition machine is a new and unique idea for our world ,two players play in any age and any place using the machine without physical contact that simulate the experience of boxing matches. These machines often feature realistic graphics and sound effects to create an immersive gaming experience. Advantages of Boxing Competition Achine 1. For Boxing Competition 2. For Entertainment • Peoples can Entertain using Boxing Competition Machine in roads, parks, malls 3. For Gymnasium • It is a great way to improve cardiovascular health, build strength and agility, and improve overall fitness.	200000	The market for boxing competition machines is quite large, as they are popular in roads, parks, and entertainment venues. The profit potential for these machines can be significant, as they attract a wide range of players and can generate a steady stream of income for operators. The boxing competition machines place in roads, parks and malls the machines generate income for each user per competition, the machines work as service, based on the number of players the machine generate income in roads, parks, malls.	The operational mechanism of the boxing competition machine involves a combination of hardware and software components. The hardware includes sensors and actuators that detect and respond to the user's movements, while the software processes the input data and generates the appropriate game responses. The sensors in the machine track the user's movements and translate them into game actions, such as punching and dodging. The actuators then provide feedback to the user, such as simulating the impact of a punch or displaying the opponent's reactions. The software controls the game logic, including the opponent's behavior, scoring, and game progression.

Taju Mohammed	Degree	27	Male	0941999817	Mining	My proposal of the project is to supply limestone blocks, which serve as raw materials or input for ceramics factory from hakim gara(hakim mountains), harar to them. The main objective of my project is to enhance the elimination of imported ceramics and reducing foreign currency for which has been paying for ceramics.	13000000	As it is known harar limestone is very interested for its quality. So, many factory need it. The production of limestone blocks are lower cost relative with another type of rocks. it require small amount of cost per blocks (measurement). Therefore if it is needed and its production cost is low the profit is clear and high. for example as current rate one block is 3500 birr while its production cost is not more than 2000 birr.	Limestone blocks production start from selecting area around a proposed project. Then, taking mining license from mine office. Then there is mobilization phase like land clearing activities and preparation of necessary mashine and finally operational phase which include production and sending productions to market.

mulugeta kebede	de degre in mechanical engineering	27	Male	0909069441	multi crop sieving machines	multi-crop sieving machine is to provide an efficient means for the separation of various crop types, based on their size and physical characteristics. Here's a structured approach based on the gathered information: Design and Fabrication A multi-crop sieving project should address the necessity for a design that caters to production-based industries and considers the need for sieving diverse crop types. It would involve the conceptualization of a versatile sieving machine that can handle different crops without requiring significant changes or downtime between operations . Principle of Sieving Sieving is based on particle size differences. The equipment would include sieves with different perforation sizes to separate crops or crop residues accordingly. A combination of horizontal and vertical movements ensures efficient separation, as smaller particles pass through the sieve, and larger particles are retained . Types of Sieving Adaptations Several adaptations could be incorporated into a multi-crop sieving machine, including vibratory, horizontal, or tap sieving options, which cater to different types of crops and their physical properties. Each method offers various degrees of efficiency and is	600000	To successfully market and profit from multicrop sieving machines, it's crucial to have a deep understanding of the target market, the various types of sieving machines available, and the strategies for reaching potential customers. Understanding the Market The global vibrating sieve machine market, which multicrop sieving machines are a part of, provides a comprehensive landscape of current market dynamics and future prospects. By analyzing industry drivers, trends, and opportunities, businesses can identify potential market segments that could be most profitable. It is essential to pinpoint the competitive landscape and the potential growth opportunities for leading players in the market, including the key players' growth rates, pricing strategies, and cost structures. Product Types and Applications Sieving machines come in different types, such as single-seat, two-seat, vibrating, rotary, centrifugal, and tumbler sieving machines. Each one has its particular use in industries such as the geological, metallurgical, chemical, construction, cement, and pharmaceutical industries. Understanding the specific needs of these industries, and how they apply to multicrop sieving is	The operational mechanism of multicrop sieving machines involves the use of a system designed to separate particles of varying sizes, typically for agricultural products such as grains, nuts, and other pulses. These machines work on the principle of sieving, where a sieve is used to segregate wanted elements from unwanted material using a woven screen or mesh. The process of sieving helps to filter out dirt, stones, and unwanted particles from the harvested crops, ensuring cleaner and higher quality yield. Main Components and Functioning Motor and Power Transmission: A motor drives the main shaft of the sieve, which in turn, initiates the motion required for the sieving process. The rotary motion provided by the motor is often converted into a reciprocating (back and forth) motion with the help of a set of pulleys and a connecting rod and wheel assembly. This design focuses on the mechanical system of the machine and takes into account factors like strength, safety, and ergonomics. Slider-Crank Mechanism: In some designs, the slider-crank mechanism is directly attached to the motor. When the motor engages, the sieving box, which is placed on a rail track within the machine, moves in a reciprocating motion. This movement facilitates the sieving process, allowing materials to be sorted based on their particle size. Depending on their size, particles pass through or are retained on the sieve surface. Sieves and Rack: The design of sieves and the sieve rack is critical for the efficient operation of multi-crop threshing machines. Adjustments are made to create machines that cater to different types of crops, ensuring versatility in agricultural applications.

						suitable for different sieving scenarios .		important for creating targeted marketing strategies.	
Aishiso Jesalegn Jessema	Bsc Degree of Architecture	27	Male	+251926329275	Medaresha Mobile and System Development	Medaresha is a mobile app that helps to navigate, facilitates, and arrange bookings, share experiences and hire local tour guides for users in a given location. The company plans to include different services like planning trips and navigating city streets to help find hotels, cafés, restaurants, supermarkets, gas stations, and other public service facilities with advanced booking, and reviewing platforms, in addition to this it helps a user to find a trained personal tour guide. Medaresha's online booking system takes advantage of the Internet's ability to organize and connect the fragmented marketplace of café, restaurants, and hotels, and tour guides into a searchable database that is consumerfocused and easy to use.	6576000	Not less than 1.02 billion dollars annually with total users of 15 million active users. (Only In Ethiopia), from the total of 10 million who have an average tech literacy which is enough to use our platform, we have taken 30% of the total serviceable addressable market so that we can take them as our target groups. and the estimated profit of the market in the first year of operation is 21,900,000 if we can invest 6,576,000.	Our product will simplify it with an efficient User Interface and best-inclass experience where you can use the same account data to book services across multiple business categories and later find out that you can also use you existing account details on the larger company infrastructure when you woul want to navigate, facilitates, and arrange bookings, share experiences an hire local tour guides for users in a given location. People nowadays prefet to not waste time and gain as much efficiency as possible. A user will have to sign up followed by selecting their personal interest areas. After doing so the user will be able to navigate, book and share experiences on his personal account. Our product will offer these services by having the following advantages.

Yohannes Wasihun Haile	Undergraduate degree	27	Male	0904400315	Renewables energy conserving technology	Husky Energy and Technologies PLC is a company that specialises in renewable energy. We are producing biomass pellets and improved cook stoves. These products combat indoor pollution, which kills 4 million people around the globe annually, including 60,000 in Ethiopia. The majority of these deaths are among women and children under 5 years old. Sustainable biomass pellets: Made from readily available waste such as coffee husks, these pellets reduce reliance on hazardous wood fuels while providing farmers with additional income. Better cookstoves: Our flagship Kilbich charcoal stove reduces smoke emissions, shielding families from respiratory illnesses. We are proud to have sold over 500 units in just 5 months, demonstrating its efficiency and affordability.	11500000	Our Kilbich charcoal stove burns our fuel efficiently, reducing smoke and fuel consumption. And the demand is undeniable: 500 stoves have been sold in just 5 months! Cleaner, less expensive cooking is gaining popularity. With rising pollution and energy demand, improved energy solutions are essential. Such products are not only used in rural areas but also by city dwellers. Husky EnTech is poised to revolutionise clean energy with a staggering market potential of 900,000-1,100,000 stoves just in Addis Abeba and a target market of 200,000. Profit margins of 28.33% for small stoves and 31.56% for large stoves, respectively, add fuel to the fire. Imagine the fuels that we could sell to all our stove customers. It makes it a profitable business model.	The stoves are made at our workshop shop from steel, fiber glass and other materials. And our fuels are made from coffee husk and sawdust. We distribute the products online, at supermarkets, house hold item retailer and at our shop.

	Dereje Adugna Degefa	Bachelor degree	27	Male	0922874122	Modern livestock	Since Ethiopia is one of the richest countries in the world by livestock due to good environmental conditions for the system but until know it is not supported by technology and educated man cannot participate on it. however our countries policy is agricultural lead industry but until know it doesn't Successful so if I obtain what I want for our plan I want work on both individual and by group accordingly. I have enough place and obtain their basic needs nearly. It is easily marketing and more benefits if supported by technology example if one cow gives 20 litres per day monthly I obtain around 30000bir.	200000	As I mentioned before 11 titres milk is 40-50 birr with out any additional. so if I have 2 or 3 cows and they give 20 litres per day I obtain around 30000-60000 bir. I have enough place for livestock from North shoa wich is 90km from Addis and distance for Addis and also their is many groups how collect milk and transport for the industry for last production	It is not as much as difficult because I have enough place and our surrounding is contactable with grass and pure water so it doesn't challenge us if I obtain initial capital

Dagim Tamene Jote	MA in Accounting and Finance	26	Male	0910601500	Coffee, Butter and Honey Shop Business in Mettu Town	**Project Proposal: "Mettu Sustainable Harvest."** We propose establishing a community-driven sustainable agriculture project in Mettu Town. Focused on organic farming methods, our initiative aims to empower local farmers, promote eco-friendly practices, and ensure a consistent supply of high-quality produce. By fostering environmental stewardship and economic growth, "Mettu Sustainable Harvest" seeks to create a resilient and thriving agricultural ecosystem, benefiting both the community and the environment.	100000	The market potential for "Mettu Bliss Brews" is promising, targeting coffee enthusiasts, health-conscious consumers, and those seeking unique flavor experiences. With a strategic location, distinctive offerings, and a growing interest in specialty coffee, the business anticipates steady foot traffic and customer loyalty. The profit potential lies in creating a niche market, capitalizing on the demand for quality coffee, artisanal butter beverages, and locally sourced honey-infused treats, ensuring a sustainable and lucrative venture in the vibrant Mettu Town community.	"Mettu Bliss Brews" operates by sourcing premium coffee beans, artisanal butter, and local honey. Trained staff skillfully prepare signature Butter Brews and honey-infused treats, ensuring a unique and consistent flavor profile. Efficient inventory management guarantees a steady supply of fresh ingredients. The prime location fosters a welcoming atmosphere for coffee enthusiasts. Social media campaigns and collaborations with local influencers drive visibility. The operational focus is on quality, sustainability, and customer engagement, creating a seamless and delightful experience for patrons seeking distinctive coffee blends and artisanal treats in Mettu Town.

Tilahun Ali	5th year University Student	26	Male	+251939575486	Automatic Tool Change Router CNC machine	Our proposal introduces an innovative Automatic Tool Change (ATC) system for your CNC router, enhancing operational efficiency. The ATC feature enables seamless transitions between different cutting tools, reducing downtime and manual intervention. This upgrade ensures precision and versatility in machining processes, optimizing production workflows. With a user-friendly interface and robust design, our ATC solution promises to elevate your CNC machine's performance, ultimately leading to increased productivity and cost-effectiveness. Embrace the future of CNC machining with our cuttingedge ATC technology. we innovate the software, electrical, and mechanical parts of the machine.	1500000	The Automatic Tool Change (ATC) Router CNC machine market thrives due to rising demand for precision manufacturing in diverse sectors like woodworking, advertising, and interior design. These industries are transitioning from manual labor to technology, such as CNC machines. Understanding the challenges of importing, with machines priced over 2.5 Million birr, we offer our product at less than half the cost. This not only makes it more accessible to customers but also reduces the foreign currency requirement by 90% compared to imported alternatives.	we have already started the business by collaborating with nongovernmental institutions to do the prototype with a small workshop which rented by our money. so if we get 1,500,000 we will start manufacturing by 1. Acquire Space: Consider acquiring 200 square meters from the government or renting space 2. Raw Material Import: Allocate funds for importing necessary raw materials 3. Manpower Hiring: Hire skilled personnel for machine assembly, quality control, and operational roles. 4. Manufacturing Setup: Set up the manufacturing process, including machinery installation, assembly lines, and quality assurance protocols. 5. Sales Strategy: Develop a sales strategy to effectively market and sell your CNC machines to customers.

Nasir Dibo Lenjiso	Degree	25	Male	0927089337	WAMARA POULTRY PRODUCTION CENTER	The Wamara Poultry Production Center aims to establish a competitive poultry farm in Shashemenne town, Oromiya region, focusing on high-quality egg and chicken production. The business, founded by four veterinarians, outlines short- and long-term objectives, emphasizing market penetration, quality assurance, and expansion. The founders prioritize work for members, customer loyalty, and market linkage in the short term, with long-term goals including business expansion, species diversification, and increased market presence. The location in Shashemenne was chosen due to high demand and limited supply in the poultry market. The business adopts a competitive pricing and quality assurance strategy, backed by effective marketing and promotional activities. The financial plan outlines expenses for poultry houses, chicks, feed, equipment, utilities, and labor salaries. The risk assessment includes potential challenges such as capital shortages, strong competition, management failures, revenue fluctuations, pricing changes, and health risks related to contagious diseases and the mortality of chickens. The plan indicates a focus on preventative measures and collaboration with	1000000	The Wamara Poultry Production Center has promising market potential fueled by high demand in Shashemenne town, where competitors struggle to meet supply. With a focus on competitive pricing, quality assurance, and strategic marketing, the business aims to secure a strong market position. Short-term goals emphasize market penetration and customer loyalty, while long-term objectives include expansion and diversification for increased profitability. The scarcity of suppliers in the region offers a favorable environment for growth, positioning the business with significant profit potential in the thriving poultry industry.	Wamara Poultry Production Center operates by leveraging the expertise of four veterinarians to ensure efficient poultry farming in Shashemenne town. The venture focuses on producing high-quality eggs and chicken, implementing modern technology and effective management. The operational structure includes a general manager overseeing four specialized roles: human resource, customer service, and financial management. The business emphasizes short-term goals like market penetration and customer loyalty, supported by competitive pricing and quality assurance. Long-term objectives involve expansion, species diversification, and sustained profitability. The operational mechanism prioritizes rigorous health measures, strategic marketing, and collaborative efforts for sustainable growth in the dynamic poultry market.

igist ebremeskel sffaw	Bsc	25	Female	0914525596	A Modern Approach to Sustainable Fish Farming	this proposal introduces a groundbreaking fish farming concept that blends cutting-edge technology with sustainable practices. Our closed-loop aquaculture system prioritizes water efficiency, minimizes environmental impact, and ensures optimal fish health. By combining innovation and ecoconsciousness, it is set to revolutionize the future of fish farming with enhanced productivity and minimal ecological footprint.	800000	The methodology integrates cutting-edge aquaculture practices with sustainable technologies to create an innovative and efficient fish farming system. The process begins with a comprehensive site analysis, considering local environmental conditions and optimizing land use. Next, state-of-the-art recirculating aquaculture systems (RAS) are employed to efficiently manage water resources, ensuring minimal waste and environmental impact. The cultivation process involves utilizing advanced fish breeding techniques and selecting robust, fast-growing species, maximizing output while maintaining ecological balance. Automated monitoring systems with sensors and data analytics are implemented to track water quality, fish health, and overall system performance in real-time. To address feed sustainability, it explores alternative, eco-friendly feeds, incorporating insect-based or plant-based options to reduce dependency on wild-caught fish for feedstock. The closed-loop system significantly minimizes water usage, mitigates pollution, and eliminates the risk of introducing diseases to natural water bodies. It collaborates with local communities to implement training	The proposal introduces fish farming concept that blends cutting-edge technology with sustainable practices. Our closed-loop aquaculture system prioritizes water efficiency, minimizes environmental impact, and ensures optimal fish health. By combining innovation and eco-consciousness, it sets to revolutionize the future of fish farming with enhanced productivity and minimal ecological footprint.

Ayenew Alemu	BSc degree	25	Male	0961873585	Maresha Plus - Empowering Rural Ethiopian Farmers with Sustainable Innovation	The Maresha Plus, a hybrid tillage tool, empowers Ethiopian farmers. Its strategic metal components reduce deforestation, while its familiar design and modular construction ease adoption. Deeper plowing boosts yields, while lighter weight and ergonomic features improve farmer wellbeing. This sustainable solution empowers communities, improves food security, and cultivates a brighter agricultural future. Let's bridge tradition and innovation, one furrow at a time.	500000	The Maresha Plus targets a vast market of over 10 million Ethiopian farmers, tackling their deforestation, yield, and labor challenges. Its affordability and modularity appeal to individual farmers, while partnerships with cooperatives and government initiatives unlock wider adoption. Revenue streams include direct sales, maintenance services, and training programs, while cost optimization and local production boost profitability. This sustainable solution not only empowers farmers but also unlocks significant market potential and profit for years to come.	The Maresha Plus blends tradition with innovation: Familiar wooden frame: Provides comfort and ease of use for farmers accustomed to Mareshas. Strategic metal components: Metal plowshare, beam(half), and handle(half) enhance durability and reduce deforestation. Adjustable working angle: Enables deeper plowing compared to traditional tools, boosting soil health and yields. Modular construction: Simplifies assembly, maintenance, and empowers communities through local repair capabilities. Mud-resistant and self-cleaning side wings: Minimize downtime and cleaning effort. Adjustable depth and width: Cater to diverse crops and terrains, maximizing efficiency. This hybrid design empowers Ethiopian farmers with a familiar tool, enhanced by innovative features for a sustainable and productive future.

fuad shafi sabri	Frist degree	25	Male	+251954617119	Leather product manufacturing	This project title is concernig with designing and manufacturing of leather product like leather hand bagg, leather shoe, leather jacket, leather belts, leather wallets, and other leather goods like furniture and car sit, with only some starting capital hince i have leather engineering profisional with enouph working experience as designer and production assistance manager at diferent leather production sector.	200000	In our country ethiopia there is more demand for leather product like women hand bagg and male travel baggs as well as leather jacket since in most of the country leather product is used as indicator of wearer personality. Its also very profitable since there is probability to export at foreign market with good quality and best design feature and also in our country ethiopia there is very large population of women wich needs to have very expensive leather hand bagg to express their stutus level.	This business idea can be started with only one sewing machine and other cutting and designing material and the most challenged thing to start this busines is only getting place and machine to start so, if there some initial capital to buy one machine its very easy to start this business. Designing, cutting, and constructing the product is very simple process of making leather goods and product.

Nesradin Jemal	Some University Courses	24	Male	+251968242599	Waste Management	Our waste management project aims to address the growing need for sustainable waste solutions in urban areas of Ethiopia. Through efficient waste collection, recycling, and composting services, we will contribute to environmental preservation and public health improvement. Our innovative approach focuses on community engagement and education to promote responsible waste disposal practices. By partnering with local municipalities and businesses, we aim to create a comprehensive waste management system that benefits both the environment and the community.	150000	The market potential for our waste management project is significant, given the increasing urbanization and environmental awareness in Ethiopia. With a growing demand for sustainable waste solutions, there is a substantial opportunity to capture market share and generate revenue from waste collection, recycling, and composting services. Additionally, as more businesses and municipalities seek eco-friendly waste management options, our project has the potential for long-term profitability and scalability. By providing cost-effective and environmentally responsible solutions, we anticipate strong demand and sustainable profit potential in the burgeoning Ethiopian waste management market.	Our waste management project will operate by establishing a network of waste collection points in urban areas, utilizing specialized vehicles and trained personnel to gather various types of waste. The collected waste will then be sorted, with recyclable materials processed for resale and organic waste composted for use in agriculture. Additionally, we will offer waste disposal services to businesses and municipalities, ensuring compliance with environmental regulations. Our operational mechanism will prioritize efficiency, sustainability, and environmental responsibility, providing comprehensive waste management solutions to meet the needs of our clients and contribute to a cleaner, greener Ethiopia.

Solomon Mesena Mekuria	BA degree	23	Male	0982830088	Biogas production from animal dungs and wastes in rural areas	We propose to start a biogas production business using dung and animal waste as a source of energy for cooking, heating, and lighting. The business will be located in a rural area where there is a high concentration of livestock. The objectives are to provide an alternative source of energy for the local community, promote sustainable development, generate income for the business owners, and create employment opportunities. The capital investment required is one million birr. The biogas production process involves collection, mixing, anaerobic digestion, gas storage, and distribution. The expected results are biogas production within three months, income generation, and employment opportunities.	150000	The market potential for a biogas production business in a rural area with a high concentration of livestock is significant. The local community relies heavily on traditional sources of energy such as firewood and charcoal, which are not only expensive but also contribute to deforestation and air pollution. Biogas provides a sustainable and affordable alternative that can be used for cooking, heating, and lighting. The business can also target nearby agricultural communities that produce organic waste, which can be used as a raw material for biogas production. The profit potential is also high, as the cost of producing biogas is relatively low compared to traditional energy sources. The business can generate income from the sale of biogas, as well as from the sale of fertilizer produced as a byproduct of the anaerobic digestion process.	The biogas production business involves setting up a biogas plant that utilizes organic waste from livestock and agriculture to produce biogas through anaerobic digestion. The organic waste is collected and fed into the biogas plant, where it undergoes a process of decomposition in the absence of oxygen, producing biogas and fertilizer as byproducts. The biogas is then purified and stored for use as a source of energy for cooking, heating, and lighting. The fertilizer can be sold to farmers as an organic fertilizer. The business requires regular maintenance of the biogas plant and the collection and transportation of organic waste. The revenue is generated from the sale of biogas and fertilizer.

Abdulkerim	University	23	Male	0935333130	Electrical bike	Affordable electric bicycles with unique features - Ease of maintenance and repair - Environmentally friendly transportation option - Suitable for sports and leisure activities - Time-saving and efficient for delivery services Customer Segments: - Individual consumers interested in ecofriendly transportation - Delivery service providers - Sports enthusiasts - Local and international retailers	5000000	The market and profit potential of electric bikes is significant and growing. As awareness of environmental issues and the need for sustainable transportation options increases, the demand for electric bikes is also rising. The global electric bike market is expected to continue growing at a rapid pace in the coming years. The profit potential for electric bikes can be substantial, especially for manufacturers and retailers who can tap into this growing market. With the right marketing and distribution strategies, there is an opportunity to capture a significant share of the market and generate substantial profits. Additionally, as technology continues to improve and costs decrease, the profit potential for electric bikes is likely to increase even further. As battery technology becomes more efficient and affordable, electric bikes will become more accessible to a wider range of consumers, further boosting their market potential. Overall, the market and profit potential for electric bikes are promising, and businesses in this sector have the opportunity to capitalize on the growing demand for sustainable transportation options.	The operational mechanism of an electric bike business involves several key components, including manufacturing, distribution, sales, and after-sales service. Here's a breakdown of the operational aspects: 1. Manufacturing: The business would need to either manufacture electric bikes inhouse or source them from reputable manufacturers. This involves designing the bikes, sourcing components such as frames, motors, batteries, and other parts, assembling the bikes, and conducting quality control checks. 2. Distribution: Once the electric bikes are manufactured, they need to be distributed to retail outlets, dealerships, or directly to consumers. This may involve setting up partnerships with distributors or establishing a network of retail locations where the bikes can be sold. 3. Sales and Marketing: An effective sales and marketing strategy is crucial for promoting and selling electric bikes. This may involve online and offline marketing efforts, such as creating a strong online presence, advertising through various channels, participating in trade shows, and offering promotions to attract customers. 4. After-Sales Service: Providing after-sales support is important for customer satisfaction and retention. This includes offering warranties, servicing and repairs, spare parts availability, and customer support for technical inquiries. 5. Regulatory Compliance: Ensuring compliance with local and international regulations and standards for electric bikes is essential. This may involve obtaining necessary certifications, adhering to safety standards, and staying updated with evolving regulations. 6. Supply Chain Management: Managing the supply chain effectively is crucial to ensure a steady flow of components and finished products. This involves coordinating with suppliers, managing inventory, and optimizing logistics to minimize costs and delivery times. 7. Research and Development: Continuous research and development efforts are needed to stay competitive in the electric bike market. This includes improving techn

Yohannes Bultie Tadesse	Diploma, L3 Automotive Technology /Auto Mechanics/	22	Male	0943993529	proper plastic bottle waste management.	Project Proposal Aimto collect, sort and utilize used plastic bottles with a lower labor force for the safety of the worker and efficiency of the process of recycling. Goalto fabricate machine to develop a website and to launch the business. On long term we will increase our service by partnering with other firms to make sustainable Progress for our environment and for the profitability of the company. We intend to introduce a new approach to the public and the costumers we want to make brand that on longer term can substitute competitors. Thank you.	400000	The marketthe market has potential but the working method they use is reducing there profit. Price the market buys an inventory 5-12 birr per 1kg. from labor collectors. pays extra fee to utilize the inventory 10 birr. Sell the market sells the inventory from 18-20birr per 1kg. profit the market has a low profit 2birr on average per 1kg. Our company. we project to process 1kg of inventory on 15 minutes Cost on average we have calculated the cost to collect, sort and utilize 1kg inventory dbirr. sell we sell our inventory on average by 18 birr. profit our profit after tax(15%) is 2.1 birr. Conclusion according to a study by "industry and market reports/statics from 2024-2026" Ethiopian plastic bottle packaging will increase by 3.56 % growth rate, and recycling industries which process bottles like "Bamak foam and plastic industry" needs 15 tones per day for its new project.	Operational Mechanism capital an initial capital of 400000 birr purpose the fund is used to fabricate machine develop website launch the business company the company will start as a sole proprietorship. and in long term will sell the company to stack holders. The business gives a plastic bottle disposing service for public areas by a machine which the company intends to fabricate has all the designs and production cost all clear and easy and friendly to use even by a lay man.

Salman Ali Abdurahman	University student	21	Male	+251906822199	Smart Farming System	AutoGebere Smart Farming System is like a farming superhero! It helps farmers grow more crops and save money by giving them cool tools. With a smart central hub and special devices in the field, farmers can check on their crops from anywhere. It even suggests the best crops to plant and how much water and fertilizer to use. Plus, it's easy for everyone to use, no matter if you read a lot or a little. We're making farming super smart and affordable for everyone!	5200000	AutoGebere is a game-changer, especially in Ethiopia, where farming is a whopping \$5 billion industry! Our Smart Farming System brings big benefits to farmers and investors, making that industry even more incredible. As we dive into this giant market, the potential for growth and profits is skyhigh. Imagine turning a \$5 billion field into a tech-savvy paradise with AutoGebere!	AutoGebere operates like a smart captain for farm owners. The Central Controller is the brain, giving farmers real-time info on soil, water, and weather through an easy display. It's like a remote control for their farm! Then, we sprinkle the field with special devices that click pics and collect data. All this info goes back to the Central Controller, turning it into a genius advisor. It says, "Plant this, use that much water, and voila!" It's farming magic, making farmers and investors smile, all thanks to AutoGebere's brilliant tech!

adu nanu tuma	High school	21	Male	0953449415	Cleaning shoes	Project Proposal: Innovative Cleaning Shoes for Sustainable Urban Environments Project Overview: Our project aims to develop a cutting- edge line of cleaning shoes designed to promote sustainable urban environments. This innovative footwear concept not only enhances personal hygiene but also contributes to the cleanliness of public spaces as users move through urban areas. With a focus on environmental responsibility and community well- being, these shoes represent a unique intersection of personal health, environmental conservation, and urban cleanliness. Problem Statement: Urban areas face ongoing challenges related to cleanliness, hygiene, and waste management. With increasing foot traffic in cities and public spaces, the accumulation of debris, pollutants, and potentially harmful substances poses environmental and health concerns. Conventional footwear often contributes to the spread of contaminants, making it difficult to maintain the cleanliness of public areas. Solution: Our solution involves the design and production of cleaning shoes embedded with environmentally friendly materials and technologies. These shoes will	100000	The market and profit potential of the innovative cleaning shoes project is significant, driven by a growing emphasis on environmental sustainability, personal hygiene, and urban well-being. Here are some key factors that contribute to the market and profit potential of this business idea: ### Market Potential: 1. Rising Demand for Sustainable Products: There is a growing global demand for sustainable and ecofriendly products, including environmentally responsible footwear. Consumers are increasingly seeking products that align with their values of environmental conservation and cleanliness. 2. Urbanization and Foot Traffic: As urban populations continue to grow, the demand for solutions that address urban cleanliness and public health becomes more pronounced. High foot traffic and the prevalence of urban pollution provide a substantial market for innovative cleaning shoes.	The operational mechanism of the innovative cleaning shoes business idea involves several key components designed to develop, manufacture, market, and distribute the product efficiently while fostering environmental responsibility and community engagement. Here's a breakdown of the operational mechanism: ### Research and Development: 1. Product Design and Prototyping: Engage footwear designers and material scientists to create innovative cleaning shoe prototypes integrating self-cleaning technology, pollutant capture mechanisms, and sustainable materials. 2. Material Sourcing: Identify and partner with environmentally responsible material suppliers to source sustainable and ecofriendly materials for the manufacturing process. 3. Performance Testing: Conduct rigorous testing of prototype cleaning shoes to ensur aspects or details related to the business

						feature self-cleaning properties and the ability to capture and remove various contaminants, such as dirt, microplastics, and pollutants, as individuals walk. This generates a proactive approach to environmental care and cleanliness, transforming urban foot traffic into a mechanism for maintaining cleaner surroundings.

OUSMAN BELAY TESHOME	1st Year University Student	19	Male	+251978784249	Home Securirty	Our project aims to create a comprehensive security and control system that revolutionizes the way individuals and organizations protect and manage their assets. By integrating advanced technologies such as cameras, sensors, facial recognition, and remote monitoring capabilities, we provide an affordable and user-friendly solution. Our commitment is to deliver a reliable, customizable, and feature-rich product that enhances security, improves productivity, and gives users peace of mind. With a focus on affordability, long-term guarantees, and exceptional customer support, we aim to set a new standard in the industry, empowering users to take control of their properties like never before.	3500000	The market potential for our comprehensive security and control system is substantial, driven by increasing demand for advanced security solutions. With a broad customer base spanning residential and commercial sectors, our affordable and feature-rich offering positions us for significant market penetration. By focusing on competitive pricing, exceptional customer support, and potential upselling opportunities, we aim to maximize profitability. Strategic partnerships and a clear understanding of our target market will further enhance our market reach and revenue potential. Overall, our business idea has strong profit potential within the growing security industry. Please take a look at it. Our product is patented by the Ethiopian Intellectual Property Authority.	Our business idea operates by designing, manufacturing, and distributing a comprehensive security and control system. The operational mechanism involves several key steps: 1) Research and development to design and refine the system's hardware components and software systems; 2) procurement and quality control of materials and components for production; 3) manufacturing and assembly of the system, ensuring adherence to quality standards; 4) establishing partnerships with suppliers, distributors, and installation professionals for seamless distribution and installation of the product; 5) implementing customer support services for technical assistance, maintenance, and upgrades; 6) marketing and sales activities to create awareness, generate leads, and secure customer orders. This operational mechanism ensures the efficient production, distribution, and support of our security and control system.

Kena Tesfaye Mosisa	Highschool, grade 12th	17	Female	0972767852	Smart agriculture monitoring system	Introducing the Smart Agriculture Monitoring System, a revolutionary solution that brings innovation and efficiency to the world of agriculture. With its four cutting-edge systems, this project is set to transform the way we cultivate and manage crops. Firstly, our Smart Irrigation System ensures optimal water usage by employing advanced sensors and intelligent algorithms, resulting in healthier plants and higher yields. Secondly, our Smart Flame and Smoke Detection System, coupled with a foam sprinkler, provides rapid response and prevention of potential fire hazards, safeguarding your valuable crops and infrastructure. Thirdly, the Smart Water Level Management System enables precise monitoring and control of water resources, preventing wastage and ensuring sustainable irrigation practices. Lastly, our Remote Controlling feature allows seamless connectivity and control over the entire system, empowering farmers to remotely manage their operations with ease. And that's not all! Our integrated ecommerce platform connects buyers and sellers directly, fostering a dynamic marketplace for agricultural products and services.	3000000	The Smart Agriculture Monitoring System is not just a project; it's a business idea with immense market and profit potential. With the global demand for sustainable and efficient farming practices on the rise, our comprehensive solution addresses critical pain points in the agricultural sector. By offering a Smart Irrigation System, farmers can achieve significant water savings, resulting in reduced costs and increased crop productivity. The Smart Flame and Smoke Detection System ensures the protection of valuable assets, minimizing losses due to fire incidents. The Smart Water Level Management System optimizes water resource utilization, promoting sustainability and responsible irrigation practices. Moreover, the integration of a remote controlling feature enhances operational efficiency and convenience for farmers. The accompanying e-commerce platform creates a direct connection between buyers and sellers, streamlining transactions and fostering a thriving marketplace. With these innovative systems and the potential to capture a significant market share, this business idea holds tremendous profit potential, making it an attractive investment opportunity for forward-thinking entrepreneurs.	The operational mechanism of the Smart Agriculture Monitoring System revolves around the seamless integration of its four core systems and the accompanying e-commerce platform. Here's how it works: 1. Smart Irrigation System: This system utilizes advanced sensors and intelligent algorithms to monitor and analyze various factors such as soil moisture, weather conditions, and crop requirements. It then automatically adjusts the irrigation schedule and water flow to ensure optimal water usage, promoting healthy plant growth and maximizing crop yields. 2. Smart Flame and Smoke Detection System: Equipped with high-tech sensors, this system continuously monitors the farming environment for the presence of flames or smoke. Upon detection, it triggers an immediate response by activating the foam sprinkler system, effectively suppressing the fire and preventing further damage to crops and infrastructure. 3. Smart Water Level Management System: This system employs sensors and real-time monitoring to track water levels in tanks, reservoirs, or irrigation channels. It provides accurate data on water availability and consumption, enabling farmers to make informed decisions regarding irrigation schedules, water allocation, and conservation measures. 4. Remote Controlling: The remote controlling feature allows farmers to access and manage the entire system remotely. Through a user-friendly interface, they can monitor sensor readings, adjust irrigation settings, control the foam sprinkler system, and view water level information. This empowers farmers to efficiently manage their agricultural operations from anywhere, saving time and effort. 5. Ecommerce Platform facilitates direct communication and transactions between buyers and sellers. Farmers can list their products, such as crops, livestock, or agricultural equipment, on the platform. Buyers can browse through available listings, make inquiries, negotiate prices, and complete transactions directly with the sellers, creating a seamless and efficient marketplace. By combini
